## CASE REPORT

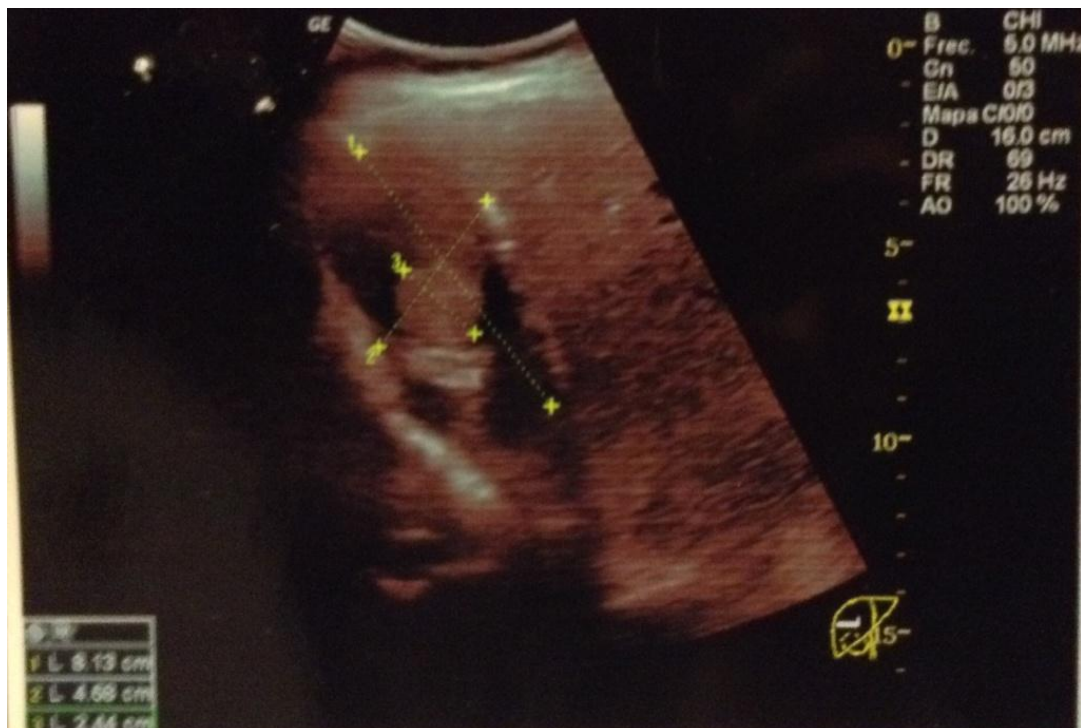

**A PATIENT WITH ENDOCRINE HEPATIC TUMOR WHO IMPROVED AFTER TAKING CITRIC ACID ORALLY****Alberto Halabe Bucay**

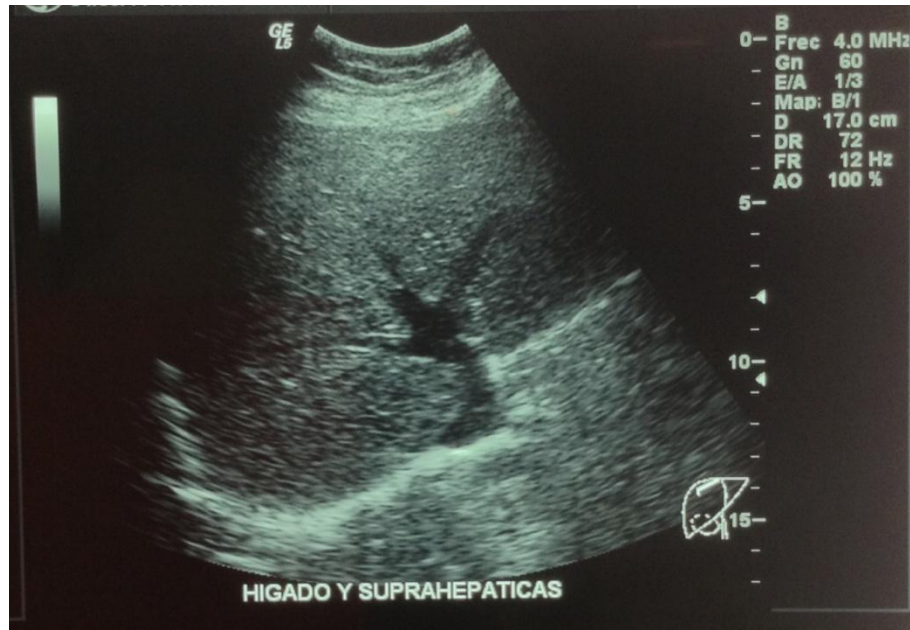

Hospital Angeles Lomas, Av. Vialidad de la Barranca s/n, Huixquilucan, 52763, Mexico.

**Abstract:****Key Words:**

A 51 years old female patient was operated for 4 times to resect an endocrine liver serotonin-producing tumor which presented relapse measuring 8.1 x 2.4 cm. by ultrasound (Figure 1) on October 13, 2013. After taking citric acid orally for 80 days, 8 to 10 grams each day, there was no evidence of the tumor (Figure 2) by ultrasound performed on January 3<sup>rd</sup>, 2014, and the general conditions of the patient were excellent.

The only explanation of this evolution and these radiological findings is the effect of citric acid, which has already been reported in other cases as effective as a cancer treatment (1-4).
